Dignity Health® St. Rose Dominican

Study Objectives

- To evaluate the efficacy of pharmacy driven efforts to reduce continuous IV sedation and assess its appropriateness
- Collect and compare the number of days spent on mechanical ventilation before and after procedure initiation
- Compare and evaluate the average number of days a patient spends in the intensive care unit (ICU)

Background

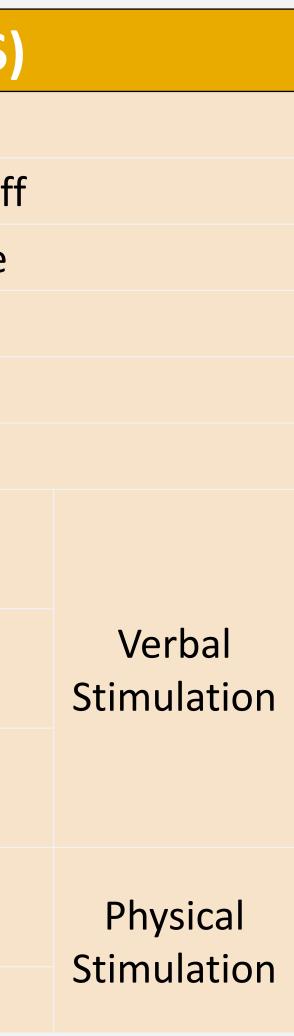

- Sedation is standard treatment for patients undergoing mechanical ventilation
- Pain, Agitation/Sedation, Delirium, Immobility, and Sleep Disruption (PADIS) guidelines recommend managing pain prior to initiation of sedation
- Light sedation and spontaneous awakening trials (SATs) are also recommended
- Shorter durations of sedation and SATs have been shown to reduce ICU stays and mechanical ventilation days

| Richmond Agitation & Sedation Scale (RASS | | | | |
|--|---|--|--|--|
| Score | Description | | | |
| + 4 | Combative: Overtly combative, violent, immediate danger to sta | | | |
| + 3 | Very agitated: Pulls or removes tube(s) or catheter(s); aggressive | | | |
| + 2 | Agitated: Frequent non-purposeful movement, fights ventilator | | | |
| + 1 | Restless: Anxious but movements not aggressive vigorous | | | |
| 0 | Alert and calm | | | |
| - 1 | Drowsy: Not fully alert, but has sustained awakening (eye-opening/eye contact) to voice (>10 seconds) | | | |
| - 2 | Light sedation: Briefly awakens with eye contact to voice (<10 seconds) | | | |
| - 3 | Moderate sedation: Movement or eye opening to voice (but no eye contact) | | | |
| - 4 | Deep sedation: No response to voice, but movement or eye opening to physical stimulation | | | |
| - 5 | Unarousable: No response to voice or physical stimulation | | | |
| | | | | |

Intervention

- Pharmacist performs daily review of patients on continuous sedation
- Patients not meeting exclusion criteria are discussed with licensed independent practitioner for continuous sedation stop

Background C

Characteristic

Age – yrs, mean (SD) Male, n (%) BMI, mean (SD) APACHE II score, mean (SD) COVID +, n (%) **Primary Outcomes** Vent days, mean (hrs) **Secondary Outcomes** All-cause mortality, n (%) CAM positive days, mean ICU days, mean RASS achieved off of continuous sedation, n (%) Continuous sedation days, mean (hrs) Continuous sedation restarted, n (%)

Prelimina

Characteristic

Primary Outcomes Vent days, mean (Hrs) **Secondary Outcomes** All-cause mortality, n (%) CAM positive days, mean ICU days, mean RASS achieved off of continuous sedation, n (%) Continuous sedation days, mean (Hrs) Continuous sedation restarted, n (%)

- Sample size: 456

MV/ICU patients

- Dexmedetomic
- Fentanyl
- Hydromorphor

• Comfort care

- Chronic MV/Training
- Death prior to
- High ventilator
- PEEP <u>></u>10) prio

• Primary

• Secondary

- All-cause mortality
- \circ ICU days

Methodology

• Retrospective chart review

Records from January 2019 to November 2022

• Data collected from Dignity Health St. Rose Dominican – Siena campus

Medical ICU and Surgical ICU

| Inclusion | | | | |
|--|---|--|--|--|
| s on continuous sedation for <u>></u> 48 hours | | | | |
| idine | KetamineMidazolam | | | |
| one | Propofol | | | |
| Exclusion | | | | |
| Tracheostomy 5 day 3 or settings (FiO ₂ <u>></u> 80%, or to day 3 | Induced hypothermia Neuromuscular blocker infusion Proning Seizures/Status Epilepticus Substance withdrawal | | | |

Outcomes

Number of ventilation days

 Confusion Assessment Method (CAM-ICU) positive days Continuous sedation days

○ Number of patients who have achieved RASS goal of -1 to +1 off of continuous sedation

Number of patients restarted on continuous sedation

Conclusion

Pending final outcome of results
